

# Visual COORDINATIONS

Trained & Certified by Lynne Abreu-Martin

Visual Coordinations (VC) is a step by step decorating technique in which the architectural features of a room are the foundation on which to build. VC looks at the architectural features of a home like the room shape, windows, and focal points to determine where to place the furniture and accessories. As a result, the furnishings are in harmony with the architecture resulting in a room that is welcoming and feels right.

- First, the room is broken down and emptied as much as possible. This first step is critical in order to read the architecture of the room and start the process with a blank slate.
- Second, the furniture is positioned with respect to the architecture starting with the largest piece of seating furniture and working down to the smaller items.
- Third, the artwork is hung with respect to the wall shapes and connected to the furniture.
- Last the lamps and accessories are layered to enhance the style and personality of the space.

Some of the most common decorating dilemmas can be solved with VC

- Make a space that feels small and cramped feel open and less crowded.
- Do not having money for a remodel but want a new look.
- Want to buy new furniture but are overwhelmed and afraid of making a mistake.
- Make a space that feels open and uninviting feel cozy and welcoming.
- Spending money and still not feeling satisfied with the results.

VC is a tried and true technique that has been used in thousands of homes and every time the results are amazing. A room that is boing and bland turns into beauty and comfort just by rearranging the furnishings that already exist in the home. The VC guarantee is complete satisfaction, or no charge and furnishings will be returned to their original position.
